

QUIZZES AUGUST 2022 onwards

SEPTEMBER 2022

From our last training session, in a burn over situation (simulation) can you please list three key roles / priorities of;

Crew Leader- To monitor environment at all times prior to occurrence. Monitor radio and Comms at all times. If a Burnover occurs it is the Crew Leaders role to make sure everyone is in the truck and accounted for before calling in " Burnover " to Control. Ensure GPS Emergency button is activated.

Driver- Ensure the truck is in a safe area prior to occurrence. Clear of thick vegetation and other hazards. The Driver must be in close contact with CL. Once CL has called for Emergency Muster for the Crew the driver can hit sirens to warn / call in crew. Ensure doors are not locked for access.

Crew- Ensure you are in safe position before occurrence and be on alert and listen to warnings / instructions given by CL if a " Burnover " is likely to occur. Ensure your access to truck is not obstructed and Emergency equipment is easily accessible.

It is everyone's responsibility, not just CL, that everyone on the crew is safe and accounted for. It is everyone's responsibility to ensure your Burnover Emergency equipment is ready to go and for use at the position you are allocated in the vehicle

AUGUST 2022

So quiz question for this month - short, sharp and nice and simple!!

I actually tested this when I took the truck out during the holidays.

Q. The 4.4. When empty (1 bar and flashing) how long does it take to fill to overflowing from a suburban hydrant running a 10m length of 64mm hose.

I did this twice and the time taken was within 8sec's difference.

ANSWER: 2 min 35 and then 2 min 54 😊
